

FEED SAFETY POLICY

At AGRITECH IS Ltd we distribute complimentary animal feeds and premixes which fully conforms to customers' orders and technical specifications whilst ensuring that the Quality, Health, Safety and Environmental systems meet and continue to meet the requirements of the current UFAS Code of Practice and Organic Farmers & Growers Standards and the relevant feed legislation.

We recognise that food and feed safety is imperative in the performance of our activities. We are aware, therefore, of the need to reduce feed safety risks and supply to our customers products without contamination or adulteration.

We are committed to provide safe feed for animals, not only based on complying with applicable local laws and regulations but also on standards to which the organisation subscribes. We encourage the use of technologies and production processes that favour feed safety within our supply chain.

In line with the above, we commit ourselves to do the following:

- Implement management systems and certification schemes that systematically identify, assess and manage our feed safety hazards and risks to continuously improve our performance, optimise production and efficiency and contribute to global food security.
- Use only those production, storage and transportation facilities that ensure the safety of our products;
- Select suppliers based on their ability to meet our requirements for safe raw materials and ingredients;
- Assist our external customers in developing customer solutions in the area of feed safety;
- Encourage the use of environmentally sound technologies for safer, cleaner and more sustainable production.
